Profile

Highly motivated Computer Science undergraduate (Class of 2027) with a strong foundation in software engineering, systems, networking and AI. Experienced in building scalable software services, high-performance data pipelines and distributed systems, with a focus on understanding systems deeply and developing reliable, practical solutions. Thrives in fast-paced environments with tight delivery timelines and enjoys taking ownership of complex projects, exploring different approaches and delivering production-ready results. A proactive collaborator with strong interpersonal skills, demonstrated through cross-campus leadership and teamwork across operational and technical teams.

Professional Experience

Technical Marketing Engineer Intern, Menlo Security • Author whitepapers, documentation, and product demos to translate complex engineering features into clear, value-driven sales collateral. • Evaluate competitor products and technical specifications to optimise product positioning for technical buyers.	06/2026 – Present Bengaluru, India
Research Intern, C-ISFCR, 5G Lab • Designed an AI - driven framework using Open5GS to detect 5G network anomalies and trigger automated recovery and assisted in the development of research proposals.	06/2025 – 08/2025 Bengaluru, India
Project Intern, Shahi Exports Pvt. Ltd. • Worked on solutions integrating blockchain-based traceability for garments, ensuring transparency from farm to fashion. • Conducted research on supply chain security and ethical sourcing using digital ledgers.	07/2024 – 07/2024 Bengaluru, India

Positions of Responsibility

Teaching Assistant, PES University • Teaching Assistant for Computer Networks (CN) and Digital Design & Compiler Organisation (DDCO), supporting 300+ students under the Computer Science Engineering Department. • Contributed to course development by revising lab manuals and student resources and designing the latest set of coursework-related problem statements and solutions.	08/2025 – 05/2026 Bengaluru, India
Executive Director, PESU I/O • Headed operations, branding and strategic growth for PESU I/O. • Spearheaded SLOT 20 across RR and EC campuses, achieving the highest reach and student interest to date through coordinated execution and unified branding strategy.	04/2025 – 04/2026 Bengaluru, India

Education

B.Tech in Computer Science Engineering, PES University

2023 – 2027

- CGPA: 7.7
- Club membership: Embrione, TAC, HoPES
- Organisations: PESU I/O, C-ISFCR

Bengaluru, India

Delhi Public School, Bangalore South

2017 – 2023

- 10th Grade CBSE marks achieved: 91%
- 12th Grade CBSE marks achieved: 80%
- Multiple national-level Olympiads winner.

Awards

Distinction Award, PES University

Recognised as 1 of the top 10% of students in the CSE Department for semesters 5 and 6.

Skills

Languages & Tools

Python, Java, C, C++, JavaScript, Bash, SQL, Git, Docker, Open5GS, REST APIs, Swift

Networking & AI/ML

scikit-learn, MERN stack, LangChain, MLflow, Firebase, Wireshark, TensorFlow, Cisco Packet Tracer

DevOps, Cloud & Database management

CI/CD, Docker, Git actions, Kubernetes, PostgreSQL, Redis, MongoDB

Other

Unity, Blender, Technical writing, UI/UX (Figma, Canva), research documentation

Projects

miniRAFT

- A fault-tolerant real-time whiteboard backed by a simplified RAFT consensus protocol.
- It features a real-time collaborative drawing board with leader election, fault tolerance, blue-green deployment, and a glassmorphic dashboard UI.

DRS-SYNC

- Designed a python based high-performance, fault-tolerant data sync system using custom UDP, checkpointing, and priority scheduling for Trackshift 2025 held at Plaksha University, Chandigarh and made it to the top 10 out of 1300 teams.
- Achieved reliable, low-latency data replication with cryptographic integrity checks and real-time monitoring.

ASCII-studio

- Built a client-side image processing application with 18+ filters, real-time previews, and multi-format export using React and TypeScript.
- Designed an incrementally cached processing pipeline with Canvas/ImageData and 16ms debounced execution for smooth ~60 FPS interactions.

SlopSense

- Built an NLP-based system to detect low-quality, repetitive, and buzzword-heavy content with explainable scoring.
- Developed a FastAPI + React application supporting local and Gemini-powered AI inference.

Secure Blockchain-Based Messaging System

- Built a decentralized, end-to-end encrypted communication platform using Ethereum, RSA/AES and IPFS. Ensured integrity with smart contract-based message logging.
